

Ageless Cell Product Details

When we fight back against cellular senescence, we're doing our part to encourage cellular energy production, promote organ vitality, support a healthy inflammatory response and more. So, by inhibiting this natural part of aging at the cellular level, Ageless Cell™ supports youthful cellular function.

Turning back the clock

The Ageless Cell™ formula was created through a partnership with Insilico Medicine, Inc., a medical technology company who created a database of 200+ geroprotectors predicted to extend life span, some of which have been shown to extend life span in pre-clinical models. Then, a proprietary algorithm based on artificial intelligence computing techniques scored these compounds' impact on pathways associated with normal aging. Without Insilico's A.I., this process could have taken decades.

Insilico Medicine's computerized A.I. analysis identified N-acetyl-L-cysteine (NAC), the potent green tea polyphenol EGCG, gamma-tocotrienol and myricetin, a naturally occurring antioxidant found in berries, fruits and herbs, as powerful "geroprotector" nutrients which can help protect the body from the effects of cellular senescence. These compounds were then scientifically tested and demonstrated efficacy at inhibiting signs of cellular senescence.^{1,2}

The first in our GEROPROTECT® line

We then combined these innovative geroprotective ingredients into a single formula called Ageless Cell™. It is the first in our GEROPROTECT® product line, which features a variety of innovative formulas designed to help your body address the natural effects of the aging process. Ageless Cell™ is the cellular longevity supplement you've been waiting for.
